

Persona ? ADHD Dopamine Dashboard

AI-Integrated Productivity Assistant

Project Links:

Frontend: [Deployed Vercel Link]

Backend: <https://persona-backend-4ru3.onrender.com>

1. Project Overview

Persona is an AI-powered productivity dashboard designed to assist individuals with ADHD through dopamine-stimulating design, instant feedback, and gamified progress tracking. It helps users manage tasks, chat with an AI coach, track XP progress, and draft professional emails—all through a clean Apple-style interface.

Key Features:

- ? AI Chat Assistant: Interact with an OpenRouter-connected LLM for concise, human-like responses.
- ? Task Generator: Convert goals into actionable task plans using prompt-based intelligence.
- ? XP Tracker: Gamified progress tracker with circular XP ring visualization.
- ? Smart Email Composer: Generate context-aware, short email drafts and open Gmail directly.
- ? ADHD-Friendly Design: Bright gradients, micro-animations, and dopamine-driven UX for engagement.
- ? Persistent History: View past chats and tasks directly in the sidebar.

2. Architecture / Flow

Frontend: HTML, CSS, JavaScript (Vercel deployment)

Backend: Flask (Python, Render Cloud)

Endpoints: /api/ask, /api/tasks, /api/xp, /api/draft-email, /api/history, /api/health

LLM Integration: OpenRouter API using models like Llama-3.1-8B, Mistral-7B, and Gemma-2-9B.

Data Flow: User -> Browser UI -> JS Fetch -> Flask Backend -> OpenRouter API -> JSON Response -> Frontend Update -> XP & History Update

3. Timeline (Development Plan)

- ? Day 1 - Setup backend Flask routes & OpenRouter API integration.
- ? Day 2 - Build frontend UI with chat, task, XP, and email tabs.
- ? Day 3 - Connect backend to frontend, add CORS, and test endpoints.
- ? Day 4 - Deploy backend on Render, frontend on Vercel, and finalize UI polish.

4. Tools & Technologies

- ? Programming: Python 3, HTML5, CSS3, JavaScript (ES6)
- ? Backend Framework: Flask
- ? Frontend Hosting: Vercel
- ? Backend Hosting: Render
- ? APIs: OpenRouter LLM API
- ? Libraries: requests, flask, flask-cors
- ? Design: Apple-inspired dopamine UX
- ? Version Control: GitHub

5. Future Enhancements

- ? Persistent database (SQLite/MongoDB) for saved history.
- ? Voice command support for chat and task creation.
- ? Custom dopamine themes and sound feedback.
- ? User authentication with saved progress.
- ? Gamified streaks and reward badges.

6. Developer Information
